

Different Perspectives on Investment Performance INTERNATIONAL VALUE FUND (TBGVX)

This paper provides a historical perspective concerning the year-by-year variability of investment returns for the Tweedy, Browne International Value Fund since its inception in 1993, compared to its benchmark index, the MSCI EAFE Index (Hedged to USD), and the MSCI EAFE Index (USD). The Fund long-term record since inception has been excellent, the return stream has been lumpy, with numerous periods of underperformance followed by periods of outperformance. *(Past performance is no guarantee of future results. See page 1 for the Fund's performance results.)* We believe it is essential for investors to understand the general pattern, sequence, and composition of investment returns for the shorter periods that comprise a successful long-term investment record. One should think of investing as a long-term journey, a veritable marathon with many starts, stops, scenery changes, and occasional bumps. Moreover, we believe investors are more likely to achieve their investment objectives if they know what to expect along the way. In our view, psychology and the ability to handle the emotional ups and downs of investing are crucial determinants of long-run investment success. This paper aims to help prepare investors for the inevitable bumps in the road.

DECEMBER 31, 2023

NOTES

Past performance is no guarantee of future results.

The Fund's portfolio characteristics are subject to change at any time.

Current and future portfolio holdings are subject to risk. Investing in foreign securities involves additional risks beyond the risks of investing in securities of US markets. These risks, which are more pronounced in emerging markets, include currency fluctuations; political uncertainty; different accounting and financial standards; different regulatory environments; and different market and economic factors in various non-US countries. In addition, the securities of small, less well-known companies may be more volatile than those of larger companies. Force majeure events such as pandemics and natural disasters are likely to increase the risks inherent in investments and could have a broad negative impact on the world economy and business activity in general. Value investing involves the risk that the market will not recognize a security's intrinsic value for a long time, or that a security thought to be undervalued may actually be appropriately priced when purchased. Dividends are not guaranteed, and a company currently paying dividends may cease paying dividends at any time. Diversification does not guarantee a profit or protect against a loss in declining markets.

Investors should refer to the Fund's prospectus for a description of risk factors associated with investments in securities which may be held by the Fund. All investments are subject to risk including the possible loss of principal. There is no assurance that the Fund will achieve its investment objective.

Although the practice of hedging perceived foreign currency exposure, where practicable, utilized by the International Value Fund and Value Fund reduces the risk of loss from exchange rate movements, it also reduces the ability of the Funds to gain from favorable exchange rate movements when the US dollar declines against the currencies in which the Funds' investments are denominated and may impose costs on the Funds. As a result of practical considerations, fluctuations in a security's prices, and fluctuations in currencies, a Fund's hedges are expected to approximate, but will generally not equal, the Fund's perceived foreign currency risk.

The performance results reflected herein are over the course of many years and reflect multiple market cycles and varying geopolitical market and economic conditions. Past performance is not guarantee of future returns.

The **MSCI EAFE Index** is an unmanaged, free-float adjusted market capitalization-weighted index that is designed to measure the equity market performance of developed markets, excluding the US and Canada. The **MSCI EAFE Index (Hedged to USD)** consists of the results of the MSCI EAFE Index hedged 100% back into US dollars and accounts for interest rate differentials in forward currency exchange rates. The **MSCI EAFE Index (in USD)** reflects the return of the MSCI EAFE Index for a US dollar investor. | Since September 30, 2003, the **Foreign Stock Fund Average** is calculated by Tweedy, Browne based on data provided by Morningstar and reflects average returns or portfolio turnover rates of all mutual funds in the Morningstar Foreign Large-Value, Foreign Large-Blend, Foreign Large-Growth, Foreign Small/Mid-Value, Foreign Small/Mid-Blend, and Foreign Small/Mid-Growth categories. Funds in these categories typically invest in international stocks and have less than 20% of their assets invested in US stocks. These funds may or may not be hedged to the US dollar, which will affect reported returns. References to "Foreign Stock Funds" or the "Foreign Stock Fund Average" that predate September 30, 2003 are references to Morningstar's Foreign Stock Funds and Foreign Stock Fund Average, respectively, while references to Foreign Stock Funds and the Foreign Stock Fund Average for the period beginning September 30, 2003 refer to Foreign Stock Funds and the Foreign Stock Fund Average as calculated by Tweedy, Browne. | **The Fund is actively managed, unlike the indexes, and consists of securities that vary widely from those included in the indexes in terms of portfolio composition, country and sector allocations, and other metrics: The MSCI EAFE Index (Hedged to US\$) illustrates how the stocks that are components of the MSCI Index would have performed in their local currencies for a US dollar investor. The MSCI EAFE Index (Hedged to US\$) is fully nominally hedged on a monthly basis, whereas the Fund only hedges its perceived currency risk where practicable. The Fund applies a different hedging methodology than the index. Index results are shown for illustrative purposes only.**

The performance shown above represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Please visit www.tweedy.com to obtain performance data that is current to the most recent month end.

(1) Inception date for the Fund was June 15, 1993. Prior to 2004, information with respect to the MSCI EAFE Index was available at month end only; therefore, the closest month end to the inception date of the Fund, May 31, 1993, was used.

(2) Tweedy, Browne has voluntarily agreed, effective May 22, 2020 through at least July 31, 2024, to waive the Fund's fees whenever the Fund's average daily net assets ("ADNA") exceed \$6 billion. Under the arrangement, the advisory fee payable by the Fund is as follows: 1.25% on the first \$6 billion of the Fund's ADNA; 0.80% on the next \$1 billion of the Fund's ADNA (ADNA over \$6 billion up to \$7 billion); 0.70% on the next \$1 billion of the Fund's ADNA (ADNA over \$7 billion up to \$8 billion); and 0.60% on the remaining amount, if any, of the Fund's ADNA (ADNA over \$8 billion). The Fund's performance would have been lower had fees not been waived during certain periods.

(3) **The Fund does not impose any front-end or deferred sales charges. The expense ratios shown above reflect the inclusion of acquired fund fees and expenses (i.e., the fees and expenses attributable to investing cash balances in money market funds) and may differ from those shown in the Fund's financial statements.**

Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

Consistency of outperformance has improved as time horizon lengthens.

INTERNATIONAL VALUE FUND

3-Year Rolling Monthly Returns (calculated monthly | net)

06/30/1993 – 12/31/2023

Out of 331 three-year measurement periods, International Value Fund has outperformed the MSCI EAFE Index (Hedged to USD) 185 times, or 56% of measured periods.

AVERAGE OF RETURNS PLOTTED ABOVE

	FUND	BENCHMARK INDEX
Down Market (Index below 0%) – 72 Periods <i>Fund beats Index in 100% of periods</i>	-0.57%	-8.20%
Normal Market (Index 0-10%) – 131 Periods <i>Fund beats Index in 47% of periods</i>	6.99%	6.20%
Robust Market (Index above 10%) – 128 Periods <i>Fund beats Index in 41% of periods</i>	15.08%	15.90%

The above chart illustrates the three-year average annual rolling returns (calculated monthly) for the Tweedy, Browne International Value Fund, net of fees, since June 30, 1993 (Fund inception: June 15, 1993), compared to the three-year average annual rolling returns for its benchmark, the MSCI EAFE Index (Hedged to USD) (the 'Index'). The horizontal axis represents the returns for the Index, while the vertical axis represents the returns for the Fund. The diagonal axis is a line of demarcation separating periods of outperformance from periods of underperformance. Plot points above the diagonal axis are indicative of the Fund's relative outperformance, while points below the diagonal axis are indicative of the Fund's relative underperformance. Returns were plotted for three distinct equity market environments: a 'down market' (benchmark return was less than 0%); a 'normal market' (benchmark return was between 0% and 10%); and a 'robust market' (benchmark return was greater than 10%). There were 331 three-year average annual rolling return periods between June 30, 1993 and December 31, 2023.

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

INTERNATIONAL VALUE FUND

5-Year Rolling Monthly Returns

06/30/1993 – 12/31/2023

Out of 307 five-year measurement periods, International Value Fund has outperformed the MSCI EAFE Index (Hedged to USD) 186 times, or 61% of measured periods.

AVERAGE OF RETURNS PLOTTED ABOVE

	FUND	BENCHMARK INDEX
Down Market (Index below 0%) – 65 Periods <i>Fund beats Index in 97% of periods</i>	4.12%	-3.26%
Normal Market (Index 0-10%) – 150 Periods <i>Fund beats Index in 47% of periods</i>	6.37%	5.87%
Robust Market (Index above 10%) – 92 Periods <i>Fund beats Index in 58% of periods</i>	13.53%	13.09%

The above chart illustrates the five-year average annual rolling returns (calculated monthly) for the Tweedy, Browne International Value Fund, net of fees, since June 30, 1993 (Fund inception: June 15, 1993), compared to the five-year average annual rolling returns for its benchmark, the MSCI EAFE Index (Hedged to USD) (the 'Index'). The horizontal axis represents the returns for the Index, while the vertical axis represents the returns for the Fund. The diagonal axis is a line of demarcation separating periods of outperformance from periods of underperformance. Plot points above the diagonal axis are indicative of the Fund's relative outperformance, while points below the diagonal axis are indicative of the Fund's relative underperformance. Returns were plotted for three distinct equity market environments: a 'down market' (benchmark return was less than 0%); a 'normal market' (benchmark return was between 0% and 10%); and a 'robust market' (benchmark return was greater than 10%). There were 307 five-year average annual rolling return periods between September 30, 1993 and December 31, 2023.

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

An excellent long-term record has included periods of sub-par returns, generally followed by periods of much better returns.

2022	-7.53	-4.60	-14.45
2023	12.47	19.95	18.24
Annualized 2013-12/31/2023	5.79%	9.71%	5.84%
Total Annualized Returns (06/15/1993 – 12/31/2023)	8.41%	6.63%	5.31%

* Inception date for the Fund was June 15, 1993. Prior to 2004, information with respect to the MSCI EAFE Index was available at month end only; therefore, the closest month end to the inception date of the Fund, May 31, 1993, was used.

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

Since its inception over 30 years ago, the International Value Fund has outperformed in 7 out of 8 calendar years in which the benchmark index had a negative return.

Performance in Down Market Years

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

A peak-to-trough chart illustrates performance from the beginning of a decline to when a new high is reached over a given measurement period. An investment in the International Value Fund on October 31, 2007, just before the financial crisis, would have recovered its losses by the second half of 2012.

The MSCI EAFE Index (Hedged to USD) did not recover until mid-2014, and the Morningstar Foreign Large Value Funds finally recovered in September 2017.

Drawdown: The peak-to-trough decline and subsequent recovery

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

An upside/downside capture ratio illustrates that, on average, the International Value Fund has significantly participated in up-market environments and historically loses less on the downside when compared to its relevant benchmark indexes.

Upside/Downside Capture Ratio

As of 12/31/2023

Upside Capture Ratio measures a manager's performance in up-markets relative to the index. A value over 100 indicates that an investment has outperformed the benchmark during periods of positive returns for the benchmark. | **Downside Capture Ratio** measures the manager's performance in down-markets relative to the index. A value of less than 100 indicates that an investment has lost less than its benchmark when the benchmark has been in the red.

What has capturing 83% of the upside and 69% of the downside done for the Fund over the past 30 1/2 years?

Total return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Prior to 2004, information with respect to the MSCI EAFE Index was available at month end only; therefore, the closest month end to the inception date of the Fund, May 31, 1993, was used.

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

It's not only the return you earn from investing that is important, but what you take home after taxes.

International Value Fund | After Tax Returns

Total Annual Fund Operating Expense Ratios*† as of 03/31/2023: 1.40% (gross); 1.40% (net)

After-tax returns are calculated using the historical highest individual federal marginal income tax rates, and do not reflect the impact of state and local taxes. Returns after taxes on distributions are adjusted for federal income taxes associated with fund distributions, but do not reflect the federal income tax impact of gains or losses recognized when fund shares are sold. Returns after taxes on distributions and sale of fund shares are adjusted for federal income taxes associated with fund distributions and reflect the federal income tax impact of gains or losses recognized when fund shares are sold. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and the after-tax returns shown are not relevant to investors who hold their fund shares through tax-deferred arrangements such as 401(k) plans or individual retirement accounts.

The performance shown, before and after taxes, represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance data quoted. Please visit www.tweedy.com to obtain performance data that is current to the most recent month end.

Prior to 2004, information with respect to the MSCI EAFE Index was available at month end only; therefore, the closest month end to inception date of the Fund, May 31, 1993, was used.

*** The Fund does not impose any front-end or deferred sales charges. The expense ratios shown above reflect the inclusion of acquired fund fees and expenses (i.e., the fees and expenses attributable to investing cash balances in money market funds) and may differ from those shown in the Fund's financial statements.**

† Tweedy, Browne has voluntarily agreed, effective May 22, 2020 through at least July 31, 2024, to waive the Fund's fees whenever the Fund's average daily net assets ("ADNA") exceed \$6 billion. Under the arrangement, the advisory fee payable by the Fund is as follows: 1.25% on the first \$6 billion of the Fund's ADNA; 0.80% on the next \$1 billion of the Fund's ADNA (ADNA over \$6 billion up to \$7 billion); 0.70% on the next \$1 billion of the Fund's ADNA (ADNA over \$7 billion up to \$8 billion); and 0.60% on the remaining amount, if any, of the Fund's ADNA (ADNA over \$8 billion). The Fund's performance would have been lower had fees not been waived during certain periods.

Past performance is no guarantee of future results. Please refer to notes at the beginning of this paper and performance information on page 1 for index descriptions and important performance and other disclosures.

Different snapshots in time can influence an investor's perspective. Performance returns change all the time. We believe the key is to focus on long-term results. The effectiveness of a long-term approach could be perceived differently at various points in time when looking at short-term performance.
